Most frequently, renters lease commercial properties to businesses, ranging from large shopping malls to single storefronts.

Commercial real estate has enjoyed a high level of investor interest in recent years, especially among institutional investors. Statista estimates that the sector generates over 30 trillion dollars worldwide revenue annually. The EMEA area (Europe, the Middle East, and Africa) is the largest market for commercial real estate, accounting for one-third of the projected size of the global industry.

The Basics of Commercial Real Estate

The two main types of real estate property are commercial real estate and residential real estate. Residential properties are those set aside for occupancy by people rather than for commercial or industrial purposes.

Commercial real estate, as the name suggests, is used in business, and multi-unit rental properties that are homes for tenants are regarded as the landlord's commercial activity.

Depending on its use, commercial real estate is often divided into four classes:

Office space

Urban and suburban office buildings can often be divided into two categories. Skyscrapers and other high-rise structures used as urban office buildings can be found in cities; some have a size of up to a few million square feet. Office buildings in the suburbs are frequently

smaller and arranged in office parks.

Industrial use

Most industrial buildings are found outside of metropolitan areas, particularly along important transportation corridors, where they contain industrial operations for various tenants. Industrial parks can also be created out of low-rise structures.

Multifamily rental

All residential real estate types besides single-family homes are included in the multifamily sector, including apartments, condos, co-ops, and townhomes.

Retail

Properties that house the shops and eateries we frequently visit are classified as retail. They may be multi-tenant (typically with an anchor, or main tenant, who helps draw traffic to the site), or they may be independent single-use structures.
